An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview and email with Alan Minsk (Reg # 35956) on 12/30/2008.

The application has been amended as follows:

In the claims:

Art Unit: 2446

 (Currently Amended) A method for detecting a spoofed network connection comprising: receiving a connection from a client;

delaying sending a greeting message for a delay period, the delay period being less than or equal to a maximum tolerable delay, the maximum tolerable delay being the longest delay that would be tolerated by a valid client;

monitoring the connection during the delay period;

if a command is received from the client before the greeting is sent, then identifying the connection as the spoofed connection;

processing any electronic mail associated with the spoofed connection;

wherein a spoofed connection electronic-mail message is processed using a process selected from the group consisting of:

deleting the spoofed-connection electronic-mail message;
marking the spoofed-connection electronic-mail message; and
storing the spoofed-connection electronic-mail message in an electronic directory.

- (Original) The method of claim 1 further comprising: sending the greeting to the client upon completion of the delay period.
- 3. (Cancelled).
- 4. (Cancelled).
- 5. (Original) The method of claim 1 wherein the connection is a Transmission Control Protocol (TCP) connection.
- (Original) The method of claim 1 wherein the client is a Mail Transfer Agent (MTA) or Mail User Agent (MUA).

Art Unit: 2446

 (Original) The method of claim 1 wherein the received command is a Simple Mail Transfer Protocol (SMTP) command.

 (Currently Amended) A method for detecting a spoofed network connection comprising: receiving a first command at a server from a client;

delaying, for a delay period, a transmission of a reply associated with the first command, the delay period being less than or equal to a maximum tolerable delay, the maximum tolerable delay being the longest delay that would be tolerated by a valid client;

monitoring a connection between the server and the client during the delay period;

if a second command is received at the server before the reply is transmitted, then identifying the connection as the spoofed connection;

processing any electronic mail associated with the spoofed connection;

wherein a spoofed connection electronic-mail message is processed using a process selected from the group consisting of:

deleting the spoofed-connection electronic-mail message;
marking the spoofed-connection electronic-mail message; and
storing the spoofed-connection electronic-mail message in an electronic directory.

 (Original) The method of claim 8 further comprising: sending a greeting to the client when the connection is established with the server.

 (Original) The method of claim 8 further comprising: transmitting the reply upon completion of the delay period.

11. (Cancelled)

12. (Original) The method of claim 8 wherein the connection is a Transmission Control Protocol (TCP) connection.

Art Unit: 2446

13. (Original) The method of claim 8 wherein the client is a Mail Transfer Agent (MTA) or Mail User Agent (MUA).

- 14. (Original) The method of claim 8 wherein the received command is a Simple Mail Transfer Protocol (SMTP) command.
- 15. (Currently Amended) An apparatus for detecting a spoofed connection comprising: means for detecting when a connection is established between the apparatus and a client device;

means for transmitting a greeting message or a reply or both to the client device;

means for delaying the transmitting means so that the greeting message or the reply or
both are not transmitted during a delay period, the delay period being less than or equal to a
maximum tolerable delay, the maximum tolerable delay being the longest delay that would be
tolerated by a valid client; and

means for monitoring the connection to detect commands that are sent by the client device at least during the delay period;

if a command is received from the client before the greeting message or a reply or both is sent, then identifying the connection as the spoofed connection;

means for processing any electronic mail associated with the spoofed connection; wherein a spoofed connection electronic-mail message is processed using a process selected from the group consisting of:

deleting the spoofed-connection electronic-mail message;
marking the spoofed-connection electronic-mail message; and
storing the spoofed-connection electronic-mail message in an electronic directory.

- 16. (Original) The apparatus of claim 15 wherein the client device is a Mail Transfer Agent (MTA) or Mail User Agent (MUA).
- 17. (Original) The apparatus of claim 15 wherein the detecting means, the transmitting means, the delaying means, and the monitoring means comprise one or more processor-based devices

running software algorithms to provide the detecting, transmitting, delaying and monitoring functions.

18. (Original) The apparatus of claim 15 wherein the connection is a Transmission Control Protocol (TCP) connection.

19. (Original) The apparatus of claim 15 wherein the commands are Simple Mail Transfer Protocol (SMTP) commands.

REASONS FOR ALLOWANCE

The following is the examiner's statement of reasons for allowance:

Independent claims 1, 8, and 15 among other things teach

The main reason for allowance in conjunction with all the other claim limitations is a

method for detecting a spoofed network connection comprising receiving a connection from a

client and delaying sending a greeting message for a delay period, the delay period being less

than or equal to a maximum tolerable delay, the maximum tolerable delay being the longest

delay that would be tolerated by a valid client. The connection is monitored during the delay

period and if a command is received from the client before the greeting is sent, then identifying the connection as the spoofed connection. Furthermore any electronic mail associated with the

spoofed connection is processed utilizing a process of deleting the spoofed-connection

electronic-mail message, marking the spoofed-connection electronic-mail message, or storing the

spoofed-connection electronic-mail message in an electronic directory.

Any comments considered necessary by applicant must be submitted no later than the

payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for

Allowance."
